

Proposal from the Innovative Pedestrian Signal Subcommittee:

The Pedestrian and Traffic Safety Advisory Committee strongly encourages the Montgomery County Department of Transportation to conduct, as a pilot, a targeted assessment of pedestrian pathways within a specific location where pedestrian and bicycle demand is high. This assessment should be integrated into the County's GIS. This assessment will be analyzed and evaluated to define where deficiencies occur and where pathways and crossing locations, etc., need to be improved. The results of this assessment and analysis will be evaluated for broader application across the County in the future.
